PORTFOLIO ojaschaudhary.vercel.app
GITHUB github.com/ojas1004
LINKEDIN linkedin.com/in/ojaschaudhary

Computer science (AI & ML) student at Jain University and full-stack developer who works on web apps end to end, from React and Next.js frontends to Express and Flask APIs and SQL databases. During a two-month on-site AI internship at Labsity I built five web apps as part of the engineering team, including an online judge, an AI-assisted hiring platform and an e-commerce store, three of them live in production. I like problems that sit between machine learning and practical software: models that need real data pipelines, and products that need a real backend.

5 web apps built during the Labsity internship	**3** of them live in production on their own domains	**40+** tables in Velinto's multi-tenant schema	**2 mo** on-site AI internship, verified certificate

EXPERIENCE

Artificial Intelligence Intern · Labsity

Jun 2026 – Jul 2026

AI & ML Internship Program, Velinto Technologies Pvt. Ltd. · New Delhi, India · On-site · Certificate LAB-IC-A4CA03AC (verified)

Worked in Labsity's engineering team across the full stack: TypeScript and JavaScript frontends (Next.js, React, Tailwind CSS), Express and Next.js APIs, MySQL/MariaDB with Drizzle ORM, and integrations for code execution, payments, AI and messaging. Contributed features, admin and CRM modules, REST APIs, database work, debugging, testing and code reviews, using Git/GitHub in an agile team.

Labsity Coding Platform — placement-prep platform and online judge — LIVE

app.labsity.in

Next.js 14 · React 18 · Tailwind CSS · Express · Drizzle ORM · MySQL · Judge0 · Monaco Editor · JWT SSO · PM2

- Students solve problems in a Monaco code editor in **C, C++, Java, Python and JavaScript**; every run and submission is executed and graded by **Judge0** against hidden test cases kept on the server.
- Company-style mock tests with timers and negative marking, daily streaks with a calendar heatmap, performance analytics, a global leaderboard and a jobs board.
- **Single sign-on** from Labsity's WordPress learning site: a custom WordPress plugin issues short-lived signed JWTs, which the API exchanges for an httpOnly session cookie.
- Employer portal to post jobs, rank applicants by coding score and run **proctored assessments** with randomised problem pools, tab-switch and copy/paste detection and automatic grading.
- Monorepo with a Next.js App Router frontend and an Express REST API on Drizzle ORM and MySQL, hardened with Helmet, rate limiting and Zod validation, running under PM2.

Velinto — AI-assisted hiring platform — LIVE

velinto.in

React 18 · Vite · Next.js 16 · Radix UI · Tailwind CSS · Express · MariaDB · OpenAI API · Razorpay · Judge0

- Two-sided platform: employers post jobs, screen and rank applicants and run assessments and interviews; candidates build a profile from their resume and use it for free.
- Resumes in PDF and Word are parsed into a **deterministic matching engine** with explainable, configurable weights for skills, experience, location and availability, so the same inputs always give the same score.
- **Responsible AI:** the OpenAI API only makes recommendations with evidence and people make every hiring decision; the database has no columns for age, gender, religion, photos or other protected attributes.
- Three apps in one monorepo (React + Vite web app, Next.js marketing site, Express API) with **strict multi-tenant isolation**: every query is scoped to an organisation across a 40+ table MariaDB schema with versioned migrations and an audit log.
- Razorpay subscriptions verified on the server through signed, idempotent webhooks; coding assessments through a Judge0-compatible service; WhatsApp and email behind provider adapters.

Ozashi — e-commerce store for a wellness brand — LIVE

ozashi.in

Next.js 16 · React 19 · TypeScript · Tailwind CSS v4 · MariaDB · mysql2

- Complete store for Ozashi Healthcare: product catalogue, shop-by-wellness-goal pages, cart, wishlist, checkout, customer accounts and a separate admin panel for managing products.
- Statically generated catalogue pages with sitemap and robots for speed and **SEO**; catalogue in MariaDB with a seed-data fallback so the shop is never empty; all money stored as integer paise.
- **Three separate identity systems** (customers, admins, anonymous shoppers) that share no cookie, secret or table; scrypt-hashed passwords with server-side sessions.

Labsity Workspace internal CRM, ERP and HR platform INTERNAL TOOL workspace.labsity.in

React 19 | Vite | TanStack Query | Express 5 | Drizzle ORM | MySQL | Better Auth | whatsapp-web.js | pnpm

- Lead management with a pipeline board, employee management with CSV bulk import and lead assignment, calendar, in-app notifications, analytics dashboards, reports and activity logs.
- **Role-based access** with Better Auth sessions across six roles: admins see every lead, employees only the leads assigned to them.
- Email and WhatsApp messaging from saved templates with per-lead variables, plus **throttled bulk campaigns** over SMTP and a separate whatsapp-web.js service.
- TypeScript pnpm monorepo where one Node process serves both the API and the built React client in production; integrates with Labsity Circle so employees' referral codes work there.

Labsity Circle campus ambassador and referral program PRE-LAUNCH circle.labsity.in

Next.js 14 | React 18 | TypeScript | Tailwind CSS | Drizzle ORM | MariaDB | Razorpay | JWT | pdf-lib

- Students join with an ambassador's referral code and get a dashboard with missions, XP, levels and a leaderboard, uploading mission proof screenshots privately.
- **Referral tree** with per-code recruitment limits; Razorpay checkout where a referral code discounts the buyer and rewards its owner only after the payment is confirmed by a signed webhook.
- Single Next.js 14 app with App Router route handlers as the API, its own database and accounts plus an optional shared sign-in with app.labsity.in; PDFs generated with pdf-lib.
- Reviewed SQL migrations and a **one-command deploy** with a health check and automatic rollback.

PROJECTS

OjasOS portfolio built as a retro desktop operating system LIVE ojaschaudhary.vercel.app

Python | Flask | MongoDB Atlas | scikit-learn | JavaScript | Canvas 2D | Vercel serverless | pytest

- Vanilla JavaScript window manager with draggable, resizable windows, a taskbar and Start menu, a touch edition for phones, notes with autosave, a photo viewer and a wandering virtual pet cat.
- Flask backend on Vercel serverless functions with MongoDB Atlas: a terminal backed by a server-side command shell, a visitor counter, command logging and a contact form protected by a **honeypot**, **salted IP hashing** and per-IP rate limiting with TTL indexes.
- **"Ask Ojas"** question answering with scikit-learn: TF-IDF vectors and cosine similarity over a hand-written knowledge base, with no external AI API.
- Live **network inspector** built on the Resource Timing API and Server-Timing headers, showing Flask and MongoDB time per request measured with PyMongo command monitoring; password-protected admin dashboard.
- Three canvas games and procedurally animated halftone wallpapers that redraw only the dots that change each frame; backend covered by 44 pytest tests running against mongomock.

EDUCATION

Jain University 2025 – 2029

Faculty of Engineering & Technology (FET)

B.Tech, Computer Science and Engineering, specialisation in Artificial Intelligence & Machine Learning

Coursework: Programming in Python, Data Structures & Algorithms, Databases, Machine Learning, Web Development

CERTIFICATION

Internship Certificate · AI Intern

Artificial Intelligence & Machine Learning Program, Labsity with Velinto Technologies Pvt. Ltd.

1 Jun 2026 – 31 Jul 2026 · issued 31 Jul 2026 · ID LAB-IC-A4CA03AC

Verify: app.labsity.in/verify/LAB-IC-A4CA03AC

INTERESTS

- Reading machine learning research papers
- Customising my Linux setup
- Retro computers and old operating systems (the inspiration for OjasOS)

SKILLS

LANGUAGES

Python, TypeScript, JavaScript, SQL, C, Bash

FRONTEND

React, Next.js, Vite, Tailwind CSS, Radix UI, TanStack Query, HTML/CSS, Canvas

BACKEND & DATA

Flask, Express, REST APIs, Drizzle ORM, MySQL / MariaDB, MongoDB

AI & MACHINE LEARNING

scikit-learn, PyTorch, NumPy, pandas, Jupyter, TF-IDF retrieval, OpenAI API

INTEGRATIONS

Judge0, Razorpay, JWT / SSO, Better Auth, SMTP, WhatsApp automation

PRACTICES

Auth and sessions, multi-tenant data isolation, webhook verification, database migrations, rate limiting, automated testing

TOOLS & DEPLOYMENT

Git / GitHub, Linux, Docker, PM2, pnpm, Vercel, Hostinger, VS Code
